Index to WEATHERWISE

Volumes 11–12, 1958–1959

All articles considered of lasting interest in the eleventh and twelfth volumes of WEATHERWISE are indexed according to author and subject. Titles are exactly as they appeared in the publication except where certain explanatory material has been added in parentheses to aid the reader. Each citation has the volume number in boldface followed by the page number. The table at the bottom of odd-numbered pages shows at a glance the relation between volume number and year.

Titles are listed alphabetically under authors. In cases of joint authorship, titles are listed under all authors. Book reviews are listed in the subject index under Book Reviews and under both author and reviewer; book titles are in italics.

In the subject index, articles are listed alphabetically by title except under Covers and Weather Summaries, where titles have been listed chronologically. An attempt has been made to cross-index articles under all applicable subject headings. Most subject headings are those used in *Meteorological Abstracts and Bibliography* published by the American Meteorological Society.

This index is to be issued biennially. A ten-year index, Vols. 1–10, was published in 1958 and is available at request from the American Meteorological Society.

Published by WEATHERWISE for the
AMERICAN METEOROLOGICAL SOCIETY
45 Beacon Street, Boston 8, Massachusetts
